SUPPLEMENTARY INFORMATION:

I. Background

Section 172 (a)(2) and (b)(3) of the Clean Air Act (CAA), as amended in 1977 (1977 Act), required sources of VOC to install, at a minimum, RACT in order to reduce VOC emissions. EPA has defined RACT as the lowest emission limit that a particular source is capable of meeting by the application of control technology that is reasonably available, considering technological and economic feasibility (44 FR 53761, September 17, 1979). EPA has developed Control Technology Guidelines (CTGs) for the purpose of informing State and local air pollution control agencies of air pollution control techniques available for reducing emissions of VOC from various categories of sources. Each CTG contains recommendations to the States of what EPA calls the "presumptive norm" for RACT. This general statement of agency policy is based on EPA's evaluation of the capabilities of, and problems associated with, control technologies currently used by facilities
